Recent Updates

- ROE of HUL has declined significantly from ~80% in FY2019–20 to ~21% in FY2025, mainly due to the GSK India merger, which was an equity-funded deal. This led to a sharp increase in the equity base, causing ROE dilution despite stable profit growth.
- The major driver of decline in ROE is the fall in asset turnover (from ~2.2x to ~0.8x). This is primarily due to a sudden increase in asset base post-acquisition, along with entry into relatively lower turnover categories like nutrition (Horlicks, Boost) and ongoing premiumization strategy, rather than operational inefficiency.
- Net profit margins have remained relatively stable (~15–17%), indicating strong pricing power of HUL. However, recent pressures such as price cuts, rising competition, and input cost volatility have slightly compressed margins, but margins are not the key reason for ROE decline.
- ROA has declined from ~33% to ~13–14% over the period, mainly due to expansion in total assets after the GSK acquisition, while earnings scaled gradually. This reflects a temporary dilution in efficiency, which is expected to improve as synergies and growth in the nutrition segment materialize.

Dupont Summary

- ROE of HUL has declined significantly from ~80% in FY2019–20 to ~21% in FY2025, mainly due to the GSK India merger, which was an equity-funded deal. This led to a sharp increase in the equity base, causing ROE dilution despite stable profit growth.
- The major driver of decline in ROE is the fall in asset turnover (from ~2.2x to ~0.8x). This is primarily due to a sudden increase in asset base post-acquisition, along with entry into relatively lower turnover categories like nutrition (Horlicks, Boost) and ongoing premiumization strategy, rather than operational inefficiency.
- Net profit margins have remained relatively stable (~15–17%), indicating strong pricing power of HUL. However, recent pressures such as price cuts, rising competition, and input cost volatility have slightly compressed margins, but margins are not the key reason for ROE decline.
- ROA has declined from ~33% to ~13–14% over the period, mainly due to expansion in total assets after the GSK acquisition, while earnings scaled gradually. This reflects a temporary dilution in efficiency, which is expected to improve as synergies and growth in the nutrition segment materialize.
